

1. Create a folder and copy the files shared to that folder.
2. Create a virtual environment in the folder using command prompt using this [link](#).
3. In the cmd Activate the environment using the command mentioned in the above link and Install the dependencies to the environment using PIP command (**pip3 install -r requirements.txt**). (Note: Please install pip if it says PIP not found)
4. In the cmd run the command - python3 app.py
5. This will give you an URL, paste the URL in the chrome tab. You will have your chatbot UI running
